

About GWMWater

Who are we?

Grampians Wimmera Mallee Water Corporation (trading as GWMWater) is a government-owned Statutory Corporation established on 1 July 2004 under the *Water Act* 1989.

GWMWater has one of the largest geographic footprints of all Victorian water businesses, covering some 62,000 square kilometres or 25 percent of regional Victoria. The service area is similar in size to Tasmania and includes 13 municipalities in full or in part. We service approximately 72,000 people living either on farms (11,000 properties supplied) or in one of 71 urban centres (33,000 properties).

What we do

GWMWater is directly involved in all aspects of the water cycle.

We operate water and wastewater treatment plants in many of our 71 towns and aim to recycle 100 percent of the wastewater we produce. We utilise desalination technology, operate pipelines, major storages, dams, weirs and pump stations to service our customers. We have responsibility under the Wimmera Glenelg Bulk Entitlement Order to perform the functions of Resource Manager and Storage Manager. GWMWater is also Resource Manager for groundwater and surface water and licencing in our region.

Our large service area presents major challenges in the provision of water and wastewater services. We harvest water in the Grampians, extract water from groundwater bores and pump water from the Murray River. From these points we store, treat, transfer and distribute water.

To deliver these services we manage a significant number of assets including bulk water supply reservoirs, hundreds of smaller storages, tanks, water towers and approximately 14,000 km of pipes.

Find out more about GWMWater and the services that we offer on our website at gmwwater.org.au

Water services

Our water services are used in and around homes, in businesses, on farms, for environmental purposes and for school, recreational and sporting community benefits.

Sewer services

In sewerred urban areas, we collect wastewater which is transferred, treated and completely reused.

Our wastewater services operate mainly in our larger towns and involve extensive recycling for water sporting fields, parks and gardens, vineyards and agricultural uses.
